

AI PERSONAL ASSISTANT

IDEA

- Luxury to own Personal Assistant is everybody's dream, this today can be achieved with help of Artificial Intelligence.
- Voice assistant is a software that can perform tasks for an individual based on voice commands.
- Work it can do are opening of any application, playing music, getting details from Wikipedia, playing YouTube music in background by your voice command.
- It can be build using AI , Machine learning algorithms with the help of Python.

Objective:

- To give user a hands - free experience.
- Traditional way of searching details online And opening an Application can be given a new touch with the help of Voice Assistant.
- Playing YouTube music in background by your voice command.

Social Benefits:

- As it involves voice command so elderly person can also take advantage of this.
- It is convenient for the naive user to use it.

THANK YOU
